Foreword

The project entitled “Equivalent Timber Names in ASEAN” was funded by the Japan ASEAN Integrated Fund (JAIF) through the ASEAN Secretariat and executed by the Forest Research Institute Malaysia with the cooperation of the ASEAN Member States (AMS). I am glad that the project has been carried out successfully within the duration of ten months.

The main objective of the project is to collate and develop a listing of equivalent timber names among AMS. I have been informed that the project received a good cooperation from AMS, and the participants of the two workshops participated actively during the discussion.

I am grateful to JAIF for providing the funding for the project. I would also like to extend my sincere thanks to the ASEAN Secretariat for approving the project and the support and approval rendered by the Government of Malaysia through the Ministry of Water, Land and Natural Resources.

Finally, I wish to congratulate the project team for completing the project on time. I hope the document produced is useful to the timber industries in ASEAN in particular, and the overall timber trade in general.

Preface

The project (AGF/FOR/18/001/REG) was funded by the Japan ASEAN Integrated Fund (JAIF) through the ASEAN Secretariat. The aim of the project is to collate and develop a listing of equivalent timber names among ASEAN Member States (AMS).

During the implementation of the project, two workshops were conducted in Malaysia. Two participants from each AMS were invited for the workshops. During the first workshop, participants were briefed on the objectives of the project and agreed on a standard format where each participating country was required to furnish the information to the project leader at FRIM for compilation and analysis. During the second workshop, an analysis of the data provided by the AMS was discussed and finalized.

This report is made up of two parts. Part 1 consists of Timber Trade Name in alphabetical order and Equivalent Trade Name with botanical names as a reference. Part 2 consists of the original database with details like botanical names, families, trade names and local names.

This publication will be useful as a quick reference on timber names to the timber trade in ASEAN and the international market.

Acknowledgements

The project leader and team members wish to express their sincere gratitude to the ASEAN secretariat for approving the project and Japan ASEAN Integrated Fund (JAIF) for the funding. Our special thanks also go to the Government of Malaysia through the Ministry of Water, Land and Natural Resources (formerly Ministry of Natural Resources and Environment) for their endorsement and support, Director General of the Forest Research Institute Malaysia (FRIM) for his support and encouragement, Forestry and Forest Products Research Institute (FFPRI), Tsukuba, Japan for its support and providing an expert to guide the project team in the implementation of the project.

Introduction

With more than 4000 species of timber trees found in ASEAN Member States (AMS), and each species has its own vernacular and trade names, trading of timber and timber products among AMS and potential buyers can be a problem especially when dealing with unfamiliar names and therefore hinder the full market potential and optimum utilization of the timber resources. Thus, this project aims to collate and develop a listing of equivalent timber names among AMS. The project objective is in line with the ASEAN Economic Community Blueprint 2025 C.5 Paragraph 57 on interventions to enhancing trade facilitation among AMS and the strategic measure “(ii) Enhancing trade facilitation, and remove barriers to trade and foster competitiveness and economic integration of the FAF (Food, Agriculture and Forestry) sector in the region and the world”.

Also, it is in line with “Strategic Thrust 2 – Enhance trade facilitation, economic integration and market access” as laid down in the “Strategic Plan of Action for ASEAN Cooperation on Forestry 2016-2025”, specifically Action Programme 2.1 Activity (d): “relate to harmonise periodically standards of ASEAN forest products and specification to facilitate trade”.

Therefore, the overall objective of the project is to collate and develop a listing of equivalent timber names among ASEAN member countries. Main activities of the project include:

- (1) two workshops for the participants from AMS to agree on a harmonised data format and verify the equivalent timber listing,
- (2) compilation of timber listing from the participating AMS, and
- (3) publication of a book/document on the equivalent timber names in ASEAN.

Methodology

The information obtained is based on the data supplied by representatives from all of the AMS (see list of contributors). Contributors of AMS were requested to fill up an Excel file which was fixed by the project leader at the Forest Research Institute Malaysia (FRIM). The contributors were then invited to Malaysia on November 2018 for a workshop where further discussion on how best the information could be gathered and they were asked to submit their final data to FRIM for compilation and to discuss it further during the second workshop on January 2019. The data gathered were mainly based on published sources in their respective countries.

Format and Notes on the Text

This report is divided into two parts. Part 1 consists of Timber Trade Name in alphabetical order and Equivalent Trade Name with botanical names as a reference. Part 2 consists of the original data base with details like botanical names, families, trade names and local names. Explanation on the contents of Parts 1 and 2 are as follows:

Part 1 provides a list of timber trade names in alphabetical order and the equivalent timber trade names. The two-letter country code in bracket after the trade name is country abbreviation according to ISO-3166-1 ALPHA-2. Botanical names are included for cross-checking purposes. Local names are not included in the list.

Part 2 provides a list of timber species in botanical names arranged in alphabetical order with their respective trade and local names. Botanical names are for cross-checking purposes.

(1) Botanical Names

The timbers are listed at the generic and species level in alphabetical order.

(2) Family

The family of the species is inserted.

(3) Trade Names

Trade Names are the main names used for the purpose of trade and they are listed with their respective country names and regions in bracket. Abbreviations for the country are as follows: Brunei (BN), Cambodia (KH), Indonesia (ID), Laos (LA), Malaysia (MY), Myanmar (MM), Philippines (PH), Thailand (TH) and Vietnam (VN).

(4) Local Names

Local names are listed together with both their respective country names and regions (Table 1). It was decided that local names which appeared in more than three regions will be regarded as their respective country names. Cambodia and Laos have no official trade names for their timber species, thus their local names are regarded as the trade names.

With more than 4000 species of timber trees found in the ASEAN region, trading of timber and timber products among ASEAN countries and potential buyers can be a problem. Very often, timber traders have to deal with unfamiliar names and therefore, hindering the full market potential and optimum utilisation of the timber resources. This book provides the equivalent timber trade names for easy and quick checking. It will be an invaluable guide to timber traders and users dealing with tropical timber in the South East Asian region.
