Introduction

With the increasing trading of Indonesian timbers in the Malaysian market, FRIM has to deal with the frequent enquiries from timber traders regarding the timber species they brought in or about to bring into the country. For a large country such as Indonesia with well over 4000 species of timber trees, it is inevitable that various vernacular names are used for the same species of timber in different parts of the country. For example, the Malaysian's kempas (*Koompassia malaccensis*) is known as mengris in Aceh, Bangka, Belitung and Kalimantan, ampas in Sumatra and Kalimantan, and keranji in Sumatra. The various names used for the same species of timber give rise to problems to timber traders, particularly those names that are not known outside the particular locality.

Until now, there is no single publication that provides comprehensive information on the vernacular names of Indonesian timbers and their equivalents to the Malaysian timbers. An earlier publication by Menon (1988) provides only information on the equivalent woods of various South East Asian and African timbers, but surprisingly does not include the timbers of Indonesia. The objective of the present compilation is therefore, to provide a quick reference on the vernacular names of Indonesian timbers with special reference to Malaysian timber species. Table 1 lists the Indonesian timbers with their equivalent to Malaysian timbers whereas Table 2 provides the Malaysian timbers' names and their equivalent to Indonesian timbers. It is hoped that with the two tables provided, readers are able to cross check both Malaysian and Indonesian timbers with ease. The lists are by no mean exhaustive and it will be updated from time to time when more information is made available.

This issue of Timber Technology Bulletin has been specially produced for Malaysian timber importers/users/traders of Indonesian timbers. With over 4000 species of timber trees in Indonesia, it is inevitable that different vernacular names are used for the same species in different parts of the country. Both Indonesian-Malaysian and Malaysian-Indonesian equivalent timber names are given to facilitate quick and easy reference.

- A useful reference for timber importers/users of Indonesian timbers
- Some 1129 vernacular names of Indonesian timbers are listed here
- Botanical names are provided to avoid ambiguity
