684 pp

2015

ISBN 978-967-0622-51-4

This book contains a compilation of articles that were published as Timber Bulletin from 1995 to 2015. There are a total of 55 articles covering a wide range of topics on different aspect of wood technologies. However, for the ease of reading, this book is divided into six chapters namely Wood structure and anatomy of lesser-known commercial timbers, Timber properties and engineering, Timber processing equipment, Durability and pests of timber, Plantation resources, and Malaysia timbers and their equivalents. For every chapter, a summary is provided to explain the numerous research activities carried out by the researchers at FRIM
