Resintech sees potential in BHSB

KUALA LUMPUR: Resintech Bhd sees vast growth potential for healthy food, supplements and other related products with the increased health awareness among the elderly population in Malaysia and most developed countries following the Covid-19 pandemic.

Following the recent acquisition of a 30 per cent stake in Bionutricia Holding Sdn Bhd (BHSB) for RM8.7 million, Resintech sees plenty of opportunities which the company can leverage on in terms of products and solutions.

Resintech managing director Datuk Dr Teh Kim Poo said BHSB has a solid track record and a customer base ranging from multilevel marketing companies to sports nutrition specialists.

“It has partnered with universities and the Forest Research Institute Malaysia for research and development (R&D) activities offering customised formulations

that are safe, reliable and of high quality,” he said in a statement recently.

Resintech is a fully integrated provider of polyethylene products and uPVC, while BHSB is a biotechnology firm specialising in the production and commercialisation of plant and fruit-based extracts and active fractions through advanced nanobiotechnology processes.

BHSB is among the handful of domestic biotechnology outfits specialising in food or agriculture-based R&D that offer solutions for the food and beverage industry.

Founded in 2006 as a trader of nutraceutical, beverage and traditional herbs, BHSB now offers services throughout the entire value chain, from sourcing and supplying raw material to R&D, production and warehousing backed by its patented extraction technology.

BHSB uses advanced nano-

biotechnology processes to extract food and active ingredients derived from local plants and herbs into innovative health solutions for immune-boosting, antioxidants, detoxification, men’s and women’s health and children’s supplements.

The company’s patented extraction technology uses ultrasonic and enzyme processes to develop and produce standardised plant extracts, while its R&D team has more than 20 years of experience developing effective phytonutrients and nutraceuticals for health and beauty supplements.

BHSB’s manufacturing plant in Sungai Buloh, Selangor, is certified Good Manufacturing Practice, Hazard Analysis Critical Control Point, halal and kosher.

“We are looking forward to working with the BHSB team headed by chief executive officer Ng Kuak Ping and general manager Kong Siew Mee,” Teh said.
